

Set-to-work

A powerful and flexible work management tool - developed to solve the day-to-day challenges of running and maintaining offshore wind farms.

Planning and delivering O&M service work offshore is a complex and time-consuming task.

Sennen's set-to-work module relieves your team of costly and time-consuming administration to focus on delivery of effective O&M interventions.

Its easy to create robust and efficient daily plans that reduce downtime and maximise productivity and availability.

"In my role, I have a responsibility across vessels, turbines, and technicians. There are multiple teams, often performing highly specialist work and doing so in confined spaces. Being able to run all of this from the control room, or even remotely from home, is key."

MIKE YOUNG, OPERATIONS MANAGER, LONDON ARRAY

Digitise your O&M process to improve efficiency and increase safety.

Features

Shift Planning

Consolidated daily work plans built and checked in minutes
